DETAILED ACTION

Allowable Subject Matter

Claims 1-21 are allowed.

The following is an examiner's statement of reasons for allowance: prior art references do not teach or render obvious a DRAM having an N-doped region by adding an extra P-type implantation which is substantially completely under the polysilicon plate and substantially under the P+ doped region, to decrease a threshold voltage of the capacitor and degrading the gradient of the PN junction doping profile between storage node and N well.

Prior art references do not teach or render obvious a DRAM comprising an N well biased at a negative voltage and a N-doped region in the N well substantially completely under the polysilicon plate and substantially under the P+ doped region, to increase a retention time of the storage node of the capacitor.

Prior art references do not teach or render obvious a method of fabricating a DRAM comprising the step of N- doping a region substantially completely under the polysilicon plate and substantially under the P+ doped region, to increase a retention time of the storage node of the capacitor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
